

ANALYSIS REPORT

PROCEDURE:

Identification and quantification of cannabinoids has been performed via HPLC analysis according to Folium Biosciences Europe analytical methods. The analysis of terpenes has been carried out via GC-FID.

Samples are analysed in duplicate.

The data is reported when the duplicate analysis showed that:

- the 6 standards used in the sequence have a RSD% <2%
- the main component has a RSD% <5%
- other components to be quantified have a RSD% <10%

RESULTS:

Quotation No.: 200518.01
